

THE ALED PORTABLE LIGHT

Revolutionizing the Illumination of Nighttime Job Sites

Blue Vigil is making workers/first responders safer and more productive with our revolutionary autonomous aerial light (ALED).

WHAT IS THE ALED PORTABLE LIGHT?

Blue Vigil's ALED is the first major technological innovation for portable light towers in over 40 years.

The autonomous aerial light uses a purpose-built tethered UAV to position a high-intensity LED array 80-100 feet above the work site. This rugged, person-portable light weighs just 90 lbs. and can be optimally positioned wherever you need illumination. The ALED generates an 8,000 sq. ft. usable light field that eliminates the dangerous glare/shadows that are the main contributors to job site safety incidents and loss of productivity/quality.

WHY CHOOSE THE ALED PORTABLE LIGHT OVER A TRADITIONAL LIGHT TOWER?

- Twice the usable light area than traditional light towers
- Person-portable; no towing required
- Higher light positioning eliminates glare and shadows
- Quieter, cleaner, and more efficient to operate
- Site placement isn't restricted by terrain and trailer access
- Easier to transport and store; fits in a pickup, van, or SUV
- Can be vehicle mounted to enable fleet-wide deployment
- Minimizes the need to reposition lights

THE ALED PORTABLE LIGHT

Revolutionizing the Illumination
of Nighttime Job Sites

KEY FEATURES

- 8,000 sq. ft. usable light field (at least 5 ft. candles)
- Operating height of 40-100 ft.
- Rugged, person-portable, wheeled case
- Sets up in minutes
- Aim and control lights from the ground
- All-weather operation (IP-65)
- Extensive safety features
- Powered by wall/shore power, generator, vehicle inverter or onboard swappable battery
- Made in the USA
- Patent Pending

PRODUCT AVAILABILITY

- Beta Units - Q4 2023 (limited units remain)
- General Availability: Late Q2 2024
- Currently accepting pre-orders. Contact sales@bluevigil.com

ABOUT BLUE VIGIL

Blue Vigil is the U.S. industry leader in tether power systems for commercial drones. The RS1000 ground-based tether, compatible with most off-the-shelf drones, provides unlimited flight time when connected to a power source. Blue Vigil's tether platform is sold across the US and internationally and is currently in use by hundreds of public safety organizations across the country. Our proprietary core tether technology powers the new ALED Portable Light Platform.
